'Off the beaten path' researcher in chemical engineering/chemistry with expertise in heterogeneous catalysis, synthesis of zeolites (microporous materials), biomass valorization and bioplastics. Multidisciplinary, creative and experimental approach to solving relevant material synthesis and catalysis bottlenecks or intriguing surface science phenomena. For 3 years now, bottom-up zeolite synthesis is the main focus, bioplastics the second focus. Pioneered several scientific breakthroughs in these domains and which led to granted follow-up projects, high-impact publications and patents, with notably, one sold to industry. Motto: you miss 100% of the shots you don't take.
